

AXON™

Nonionic Surfactant based Basic Blend Adjuvant

- Axon contains three key components that help to improve pesticide efficacy.
 1. Axon contains a nonionic surfactant that enhances spray coverage, retention and absorption.
 2. Axon contains ammonium ions that help to prevent salt antagonism of certain herbicides while also increasing uptake and translocation of the pesticide solution.
 3. Axon contains a pH buffer that raises the pH (or prevents it from being lowered).
 - Raising the pH enhances the solubility of many pesticides (especially sulfonylurea and imidazilione).
 - Improves the mix-ability and allows herbicides to be more active and more readily taken in by the plant.
- Typical use rate is 1 gallon/100 gallons of spray
 - Use rate can range from 2-4 qt/100 gallons depending on herbicide
 - See pesticide labels for more specific rates
- Package Sizes:
 - 2x2.5 gallon case
 - Repack
 - 275 gallon

Always Read All Pesticide and Adjuvant Labels Prior to Use
